EDUCATION

University of Toronto

Honours Bachelor of Science, Computer Science

Toronto, Ontario

Sep. 2021 – Apr. 2026

- Relevant Coursework: Neural Networks and Deep Learning, Operating Systems, Scalable Computing, Computer Networks, Databases

EXPERIENCE

Periscope Capital

Full-Stack Software Developer

May 2024 – Present

Toronto, Ontario

- Eliminated a MySQL query bottleneck in C# data pipelines by rewriting query patterns and adding event-driven validation, reducing processing time from 3m+ to ~30s (6×) with no infrastructure changes.
- Automated classification and status tracking of security reorganizations, delivering personalized daily reports to 20 stakeholders across trading, operations, risk, and management, cutting manual reconciliation time by ~75%.
- Designed a generic, type-parameterized C# ingestion framework where each data source is implemented as a typed subclass with custom endpoint parameters, pre-fetch status checks, and row-level DTO mapping, handling status-aware polling across 20,000+ records daily on AWS master-master database infrastructure.
- Overhauled system-wide access control by implementing RBAC with granular permissions and Active Directory integration, centralizing authentication across investment platforms and eliminating auth inconsistencies.
- Deployed a Next.js application across dev and staging environments via a Bitbucket Pipelines CI/CD workflow, automating SCP-based artifact promotion and Cloudflare cache invalidation on each merge to main, with uptime monitoring and failure alerting.

Scotiabank

Software Developer Intern – Global Finance & Risk Technology

Jun. 2023 – Aug. 2023

Toronto, Ontario

- Built an internal automation tool to promote scripts, DataStage jobs, and configuration files across dev, QA, and production Linux environments, replacing a fully manual, error-prone release process.
- Implemented a Bash and KornShell automation suite covering input validation, SFTP transfer, object import/export, and permission enforcement, standardizing ad-hoc deployment workflows across teams.
- Integrated AutoSys scheduling for automated and on-demand pipeline execution, reducing manual effort per release cycle and improving deployment auditability and reproducibility.

PROJECTS

Antibiotic Resistance Classification | *Python, PyTorch, ResNet-1D* | Team of 4

- Trained a ResNet-1D model for multi-label protein sequence classification across 38 antibiotic resistance classes on CARD v4.0.1 (6,000+ sequences), achieving micro-F1 = 0.93, macro ROC-AUC = 0.98, and filtered macro-F1 = 0.89 on classes with sufficient training data.
- Prevented homologous sequence data leakage via organism-level train/val/test splits, mitigated severe class imbalance with Focal Loss ($\gamma = 2.0$) and per-class threshold optimization, and applied global max pooling for invariance to variable-length sequences.

Personal Portfolio Website | *Next.js, TypeScript, TailwindCSS, Vercel*

- Designed and deployed a personal portfolio with modular Next.js components, TypeScript throughout, and a CI/CD pipeline via Vercel with automatic preview deployments on each pull request.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, C#, Java, SQL, Bash

Frameworks & Libraries: React, Next.js, Node.js, .NET, Entity Framework

Databases: MySQL, PostgreSQL, Microsoft SQL Server, Cassandra

Cloud & DevOps: AWS (EC2, S3, Lambda, CloudWatch), Docker, Bitbucket Pipelines, Vercel

Data & ML: PyTorch, NumPy, Pandas, Matplotlib

Tools: Git, Bloomberg API, IBM DataStage, Jira
